A REDESIGNED USER INTERFACE FOR B-HIVE COMMUNICATOR IS HERE

Experience the new **b-hive Communicator** app from **Broadvoice**. We've redesigned Communicator's user interface (UI) to empower you with a modern and intuitive platform for seamless collaboration.

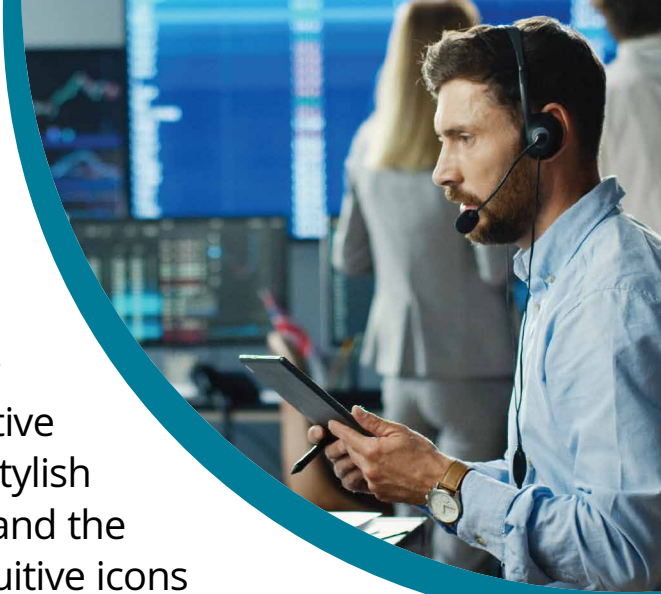

With our new UI, you'll experience enhanced accessibility and effortless navigation, allowing you to focus on what matters most — productive and efficient communications. The sleek and stylish design offers a visually appealing experience, and the new white background, vibrant colors, and intuitive icons create an engaging workspace.

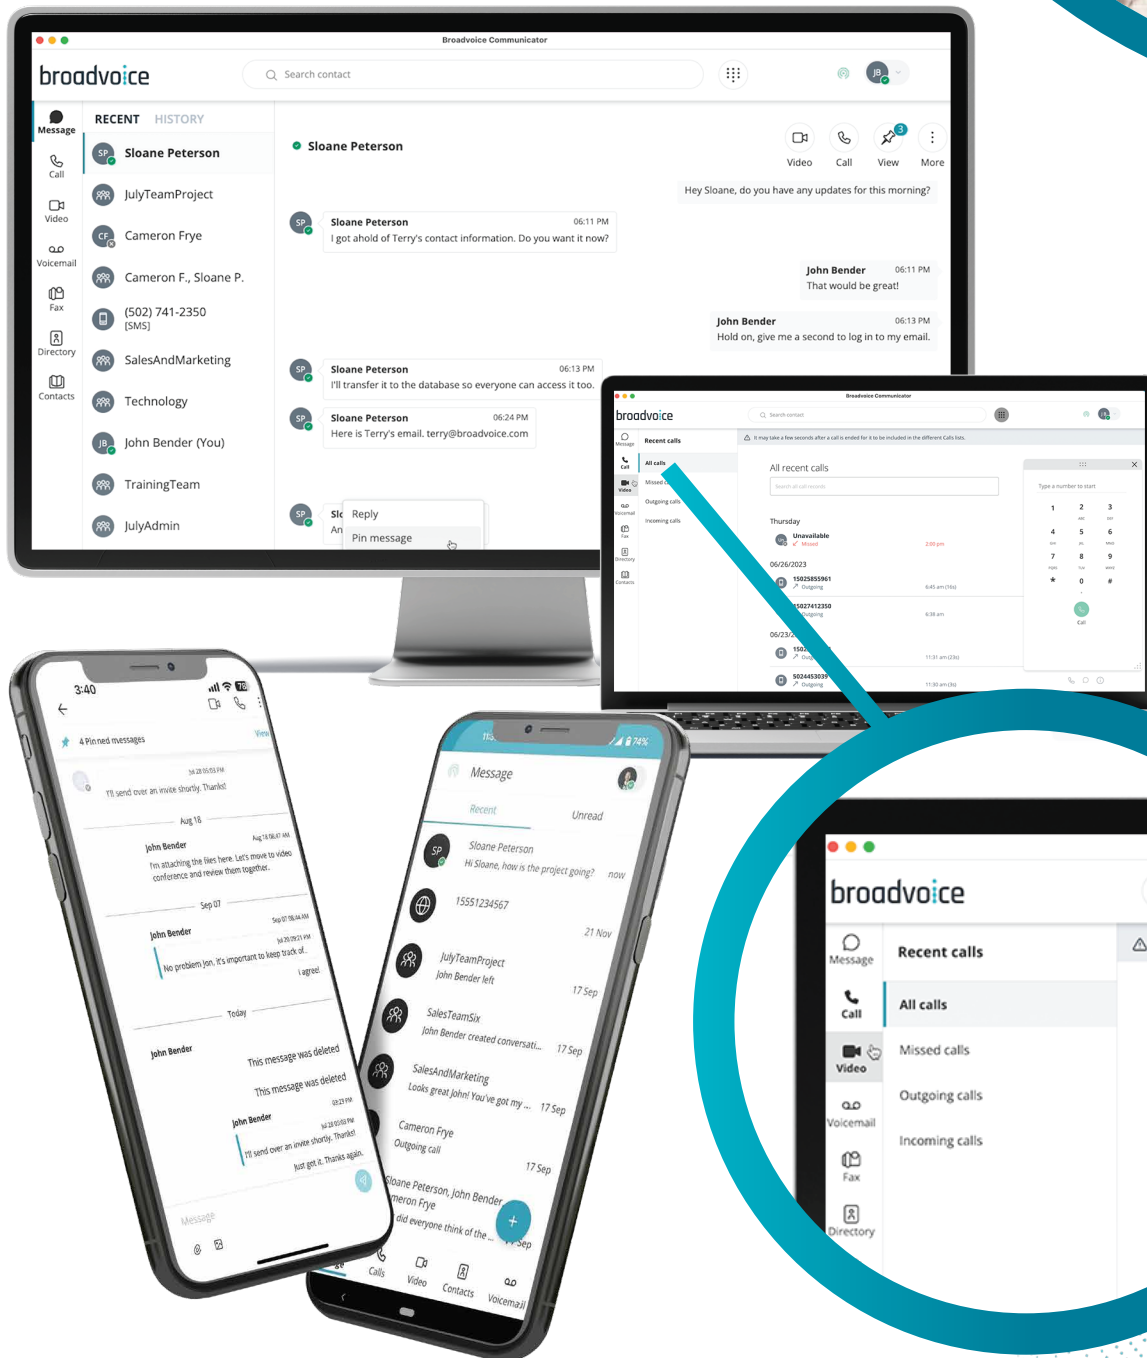

Here are some key benefits and features:

- Clear titles and highly visible icons allow for easy side navigation.
- Improved user presence (status) helps you stay connected and informed.
- Improved typography offers a pleasant reading experience.
- Enhanced button colors offer better visibility and clarity.
- The app is now optimized for smaller screen sizes and mobility.

Check out the screenshots below to view our revamped browser, desktop, and mobile apps.

NEW FEATURES

Improved Group Chat Capabilities

Group chats are an effective way for teams to collaborate. We've made them even more productive with features that allow greater control over ongoing conversations.

- **Start a Group Chat.** Easily turn a one-on-one chat into a group chat with the "Start a Group Chat" button.
- **Leave the Group.** If a user's role in a group is complete, they can easily remove themselves with the new "Leave the Group" option.
- **Remove a Member.** A group leader can remove a user from the group chat by hovering over their name and selecting the "Remove" button.

More Support for Contextual Conversations

Keeping track of multiple chats is easier with enhancements that provide context to your conversations in the app.

- **Reply in Context.** Users can "long press" to reply to a specific message. The chat and the reply will be posted together, creating a thread that's easy to follow.
- **Identify SMS Users.** Messaging on the go is second nature to hybrid and remote employees. These SMS users are now quickly identified in the chat with a globe icon and their number.
- **View the Date and Time of Sent Messages.** Chats now include line separators to show the date and time a message was sent.
- **Distinguish between Sent and Received Messages.** Messages now mimic the look of texts. For example, sent messages now appear on the right, and received messages on the left.
- **Pin Important Messages.** Users can now pin important messages or those pending or awaiting a response, allowing users to prioritize conversations.
