

# RANSOMWARE PROTECTION PACKS

Tape storage is inherently secure because data is stored offline, making it a proven solution against modern cyber attacks. It's your best last line of defense against cyber criminals—they can't hold for ransom what they can't access over the network.

## Active Vault

Creates an offline vault within the library, creating a secure "Ransomware-Free Zone."

## Pre-Configured Ransomware Packages

Scalar® i3 can be customized to match your security and compliance requirements.

## No Tape Handling

With Active Vault, an operator does not have to interact physically with the library.

| Specification  | Small – 3U   | Medium – 6U  | Large – 12U  |
|--|--|--|--|
| Capacity*  | Up to 600 TB capacity  | Up to 1.2 PB capacity                                | Up to 2.4 PB capacity                                |
