taxrules 
Cálculo de Tributos

Taxrules is a calculation engine with updated tax rules developed to automate and maintain operation of your ERP always in compliance with the legislation, validating taxes to avoid misinformation resulting from human or system failure. Save on resources and guarantee your company's safe receipt and issue of your DF-e now.

**Accurate calculation
with rules updated
in real time**

Tax validation of
Scenarios and
NF-e (inbound
and outbound)

Automatic
calculation in
integration with
your ERP

Editable tax rules
updated in real
time

History of terms
of effectiveness
and legal basis

Taxes and
withholdings
(ICMS, ICMS-
ST, IPI, II, PIS,
COFINS and
ISS)

Tax tables and
registrations
(NCM)

Tax mapping,
tax classification
(NCM), validation
of data records
and monitoring of
legislation

Calculation engine

The Taxrules calculation engine is a fully independent software component that calculates taxes for any tax operation. It may run both locally and, in the cloud, and may be embedded in your applications or operate in a centralized manner, making calculations available for consumption of your applications. It offers high performance, availability, and scalability to meet the need to calculate a large number of operations simultaneously.

Registrations (goods/services and customers/suppliers)

Our professionals are specialized in NCM classification, which ensures the correct definition of the taxes, applicable tax rates and regulatory rules. We also make the due corrections to customers and suppliers record data, identifying those that have been disqualified by the Brazilian Federal Revenue.

Tax Mapping

We identify all your transactions and suppliers from the point of view of calculation and credit, map your tax scenarios and identify the applicable rules. We work with: ICMS, ICMS-ST, IPI, PIS, COFINS and withholdings, considering the official tax attributes in the Legislation and the special tax regimes.

Tax Rules

Our rules are updated in real time and consumed by your ERP in an integrated way, by means of a software component. You can check and edit parameters, create new rules, check the history of terms of effectiveness and monitor the entire approval process.

Legal Monitoring

We monitor the Official Gazettes (Federal, State and Municipal) of the 27 states of the federation. Everything that impacts, whether directly or indirectly, your tax rules (Ruling, Benefits or Tax Attributes) is monitored, interpreted and approved with you before updating your rules.

Tables of Taxes

Sovos offers various tables of taxes that may integrate with your ERP, keeping them always updated. They include: NCM, CNAE, CFOP, NOP, ICMS, ICMS-ST, II, IPI, PIS, COFINS, ISS among others.

Specialized Support

We assist you with the implementation, technical questions and problems regarding Taxrules. We answer your calls by email, telephone and onsite, in case you need exclusive or onsite services.
