Customer Stories

Major Hospital Group

Healthcare

Outcomes

Single data view to provide decision support for resource allocation	**Co-pilot** provides integrated patient data view
Improved patient flow and reduce length of stay	Predictive model inferring risk scores

Company Bio

- Major national health care service, including hospitals, education and community services
- Over 10,000 employees
- In a year, over 1 million patients are treated in their hospitals

The Challenge

- Patients presenting to hospital emergency departments with chest pain are difficult to triage accurately
- Significant resources are expended on patients that do not have immediate health risks both in Emergency Departments and out-patients clinics

How Zetaris Helps

Zetaris allows Monash to connect to their disparate and unstructured and structured data platforms, to expedite triage and discovery processes in patient care

Zetaris and on-prem NVIDIA GPU accelerates the AI journey

Enabling instant analytics on source data

The system is trained using historical patient records from the Health records system.

Providing team of expert services from Zetaris Expert Services for 1 month to integrate data and train AI models

Providing Zetaris on a validated AI acceleration platform with GPU
